A TELESCOPIC WHEEL LOADER

“For decades, Mecalac has been developing and producing high-quality and innovative wheel loaders at the Büdelsdorf site in Northern Germany. With our articulated loaders, four-wheel steered front loaders and four-wheel steered swing loaders, we are the only manufacturer to offer all concepts for compact loaders. At Mecalac you can choose the best suitable solution for your application.

On the platform of our front loaders with four-wheel steering, the AT900 and AT1050 are telescopic loaders with an excellent stability. For this version, Mecalac has chosen a rigid chassis. In connection with the four steering wheels who assure exceptional manoeuvrability, the telescopic loaders keep their “wheels on the ground” and offer high performance – even in the most confined work sites.”

Henri Marchetta,
Chairman Groupe Mecalac S.A.S.

AT900 AND AT1050 IN 4 POINTS

**A TECHNOLOGY
MADE FOR THE
TOUGHEST WORK
REQUIREMENTS →**

The telescopic AT wheel loaders are frequently being used in material handling. With this in mind once again Mecalac has chosen the most adapted technology for the needs of its customers: parallel kinematics, a rigid chassis with four wheel steering, a cabin with two doors, and a hydraulic quick-coupler.

A close-up photograph of a yellow hydraulic cylinder, likely from a Mecalac excavator. The cylinder is the central focus, with the brand name 'Mecalac' printed in large, bold, black letters on its side. A white plus sign is positioned to the right of the brand name. The cylinder is connected to various hydraulic lines and hoses. The background is a plain, light gray color.

AT

THE P KINEMATICS

AN OPTIMISED LOADING HEIGHT AND REACH THANKS TO THE TELESCOPIC BOOM

The telescopic boom of the wheel loaders AT900 and AT1050 has changed. The two machines are from now on equipped with a telescopic boom with parallel kinematics. The P-Kinematics offer superior performances as well as a number of advantages for the user.

The new P-Kinematics guarantee **an absolute parallel guidance** of the loading forks and at the same time allow for an exceptional breakout force. The concept of the kinematics, featured on the two telescopic wheel loaders AT900 and AT1050, has many advantages for the operator. In particular, the entire architecture of the lifting arm allows for **a perfect vision** onto the equipment and the working environment; both **the operator comfort and safety** do benefit from this.

PRECISE, EFFICIENT AND ALWAYS SAFE TO WORK WITH

The lifting cylinder and the two “parallel cylinders” are now placed on the underside of the telescopic arm which multiplies the lifting force and allows for unlimited parallel guidance. In addition, for each intervention, faster and more consistent handling of materials is provided. A guaranty for precision at work, efficiency and a high level of safety.

Designed by Mecalac, the telescopic arm of the AT wheel loaders is rigid and its kinematics allow for an optimal visibility on the equipment as well as the work area and the environment of the construction site. Thanks to the powerful engine, 55.4 kW / 75 hp (74.3 imperial hp), combined with a loading height of 4.67 m (15'3") and a maximum payload on forks, respectively 2350 kg (5,180 lb) and 2860 kg (6,305 lb), the AT900 and AT1050 present to our customers an efficient and effective management of very demanding jobs in a safe work environment.

USER-FRIENDLY

STURDY AND STABLE WITH FOUR-WHEEL STEERING

A RIGID FRAME, 4-WHEEL STEERING, STABILITY AND EXCELLENT MOBILITY

Combined with an extremely robust rigid chassis, the AT loaders stand for maximum stability, retaining the center of gravity even during tight turns or when driving on rough terrain. Thus the payload always being constant, the driver can work in confidence and focus entirely on his job.

Equipped with four-wheel steering, a steering angle of +/- 35° on each axle and a turning radius of only 3.71 m (12'2") over the rear, Mecalac's telescopic wheel loaders are highly adapted to off-road terrain with incomparable manoeuvrability and mobility, even on the tightest job sites.

This substantial ability also helps to reduce unnecessary movements to a considerable extent. This appreciable dexterity also reduces maneuvers considerably and with travel and cycle times optimised this contributes to the overall performance of a job site and meeting the given deadlines.

Even on the road, the Mecalac AT loaders do not fail their reputation for comfort and driving flexibility.

USER-FRIENDLY

GETTING IN AND OUT OF THE CAB WITHOUT GETTING TIRED

**IT IS ABOARD A SPACIOUS CABIN WITH
ERGONOMICALLY ARRANGED DRIVING ELEMENTS
WHERE THE DRIVER TAKES A SEAT.**

The large tinted windows provide excellent visibility; the panoramic roof offers a perfect view for example when loading at heights. The telescopic arm and the work area always remain in the operators' field of vision.

On top of the many comfort features that are standard in the Mecalac AT loaders, access by both sides of the machine is a powerful argument for many reasons.

In addition to maintaining maximum ventilation while keeping both doors open, being able to leave the cabin even when the machine is alongside a wall or an obstacle, is a definite plus. Staying in direct contact with the worksite environment and on-site workers in the handling phase is where attention to work must be at its maximum.

AT

USER-FRIENDLY

THE MECALAC QUICK-COUPLER, EQUIPPED AS STANDARD

EAGER TO MAKE ITS MACHINES EVER SAFER AND MORE VERSATILE, MECALAC, A SPECIALIST IN THE DESIGN AND MANUFACTURE OF CONSTRUCTION EQUIPMENT FOR URBAN WORKSITES, OFFERS A QUICK-COUPLER THAT IS REMARKABLE FOR ITS LIGHTWEIGHT, ITS INTEGRATION, ITS EASE OF USE AND ITS DOWNRIGHT PERFECT SAFETY.

Being multi-brand compatible, the Mecalac quick coupler can be controlled from the drivers' seat, without risk to drop the attachment due to its electro-hydraulic locking system. It's simple and fast maintenance minimises the interventions; this makes just one factor more for a well-performing and profitable building site. Versatility is an integral part of the Mecalac machine brand. A common purpose of any urban job site in the world lies in minimising the number of on-site transports, the number of machines in motion, the number of workers on the same site – to achieve an overall contribution to environmental protection in reducing noise and air pollution.

The Mecalac quick-coupler is the ultimate connection between the machine and its attachment.

OPTIMAL PERFORMANCES

Our goal is to become the long-term partner of each of our customers and that the Mecalac AT loaders contribute to the performance and profitability of their business.

This is why we are constantly listening to feedback from the field. As a result, our wheel loaders are equipped with many advanced technical features for optimal site management. We pay particular attention to the performance of our loaders, which are stable, maneuverable, compact, powerful and which guarantee operators the best comfort and perfect safety.

Mecacrac

AT

PERFORMANCE

MANEUVERABILITY AND COMPACTNESS

MECALAC TELESCOPIC WHEEL LOADERS FEATURE A RIGID FRAME AND 4-WHEEL STEERING. THEY OFTEN EVOLVE INTO URBAN CONSTRUCTION SITES WHERE SPACE IS LIMITED AND THEREFORE DRIVING IS LIMITED, TOO.

Being able to maneuver in a single movement within a radius of 3.71 m (12'2"), effectively bypassing all obstacles ensures maximum mobility on the tightest job sites. Stability is the key and no loss of tipping load occurs when the wheels are in steered position. Fewer turns, less movement, which means also less damage to the ground to preserve.

This combination of a rigid chassis, four-wheel steering and P-Kinematics results in the power and excellent handling of AT loaders, so tasks are carried out quickly and efficiently. It is this consistency of Mecalac technologies that defines our machines and is at the foundation of our success.

MOBILITY, THE ULTIMATE MANŒUVRABILITY

1 | *2-wheel steering* =
high traction and safe
travel on the road

2 | *4-wheel steering* =
mobility and stability on
construction sites

3 | *Crab mode* =
precise movements
in confined spaces

**THE 3 STEERING
MODES ALLOW THE
AT LOADERS TO
MASTER ANY SITUATION.**

PERFORMANCE

LIFTING FORCE AND WORKING RANGE

LIFTING FORCE

On demanding job sites, your Mecalac loader achieves, if equipped with loading forks, safely and efficiently, a maximum lifting height of 4.66 m (15'3"), a maximum reach of 3 m (9'9") and a maximum payload of 2350 kg (5,180 lb) for the telescopic loader model AT900 and 2860 kg (6,305 lb) for the model AT1050. Mecalac has chosen P-Kinematics for its AT loaders and as a result achieves unlimited parallel guidance when performing material handling jobs.

TONS
[4,409 LB]

UPTO [15'3"]
4.66 M

WORKING RANGE

Equipped with a loading bucket, telescope retracted, the tipping load reaches 3470 kg (7,650 lb) and 4290 kg (9,457 lb) respectively, with a range of up to 3 m from the wheels.

The combination of this exceptional lifting force and working range allows AT loaders to perform a wide range of tasks for the most demanding applications. This is the guaranty of a highly performant and efficient result delivering the service, quality and profitability for the projects of our customers.

PERFORMANCE

LOADING WITHOUT LIMITS

IN ADDITION TO MATERIAL HANDLING ALL DAY LONG, THE TELESCOPIC LOADER LOADS AND UNLOADS MANY TIMES AND ON ANY TERRAIN, FROM THE MOST ORDERLY TO THE MOST RUGGED.

Efficiency is the order of the day and safety is not just an empty word. Taking into account the autonomy of our customers, the telescopic loaders have been designed to provide real visibility on the work area and great freedom of maneuvering on all sites, whatever the job, whichever country.

UP TO [13'1"]
4M

WHEN EQUIPPED WITH A LOADING BUCKET OR A MULTIPURPOSE BUCKET, UNLOADING IN THE DUMP OF A TRUCK CAN BE DONE AT MORE THAN 4 M HEIGHT, WHICH APPLIES TO BOTH MACHINES, THE AT900 AS WELL AS THE AT1050.

The telescopic arm extends by more than one meter and offers great loading possibilities in many work situations. Few situations will remain unresolved thanks to the AT telescopic loaders.

VERSATILITY, SERVING YOUR BUSINESS

**All Mecalac machines have one thing in common,
which is their built-in versatility.**

For the telescopic AT loaders, this versatility makes perfect sense for the integral optimisation and maximum profitability of our customers' work sites, whatever branch they are in, whatever their specialty.

USER - FRIENDLY

A LOADER FOR EACH BUSINESS

HAVING THE RIGHT TOOL, AT THE RIGHT TIME, ALL YEAR LONG AND IN COMPLETE SAFETY - THAT IS MECALAC'S FUNDAMENTAL BASIS FOR EFFICIENT WORK OF QUALITY, HIGH PERFORMANCE, COST-EFFECTIVENESS AND ON-TIME JOB SITES.

Whether you work in industry, recycling, composting, local communities or furthermore in general construction, there is always a number of multiple and diverse tasks to perform, which are typical to your business. Material handling, loading, unloading, those are the daily tasks of your mission on the job site. The Mecalac telescopic loaders have been designed from the start to meet your demands for versatility without compromising performance, quality of work and the safety of the operator, the co-workers on the job site and the local residents. In addition to the standard buckets, the AT loaders are frequently operating hydraulic tools such as a sweeper, a brush cutter, a compactor, a milling cutter, a planer, a snow plow, a grapple bucket, ...there are as many possibilities to use your AT loader 365 days a year.

The temporary work platform in this brochure may only be sold in countries where it is approved. Check with your Mecalac dealer.

SET UP YOUR AT

The Mecalac telescopic loaders, AT900 and AT1050 come standard equipped with a number of features, while at the same time remaining attentive to the specifications required by various types of customers.

From the color scheme to the choice of tires or air-conditioning, not to mention the various attachments, buckets and hydraulic tools. There are many different ways to tailor your Mecalac wheel loader to your business.

TECHNICAL DATA

DIMENSIONS WITH PALLET FORK		AT900	AT1050
PALLET FORK			
LL2	Overall length	6350 mm (20'10")	6350 mm (20'10")
BB	Minimum reach	1030 mm (3'4.55")	1030 mm (3'4.55")
CC	Maximum reach	2600 mm (8'6.36")	2600 mm (8'6.36")
AA3	Tipping angle max.	max. 15°	max. 15°
DD	Reach at maximum lifting height	1090 mm (3'6.91")	1090 mm (3'6.91")
GG	Loading height at maximum reach	1950 mm (6'4.77")	1950 mm (6'4.77")
HH1	Plunge depth	210 mm (0'8.27")	210 mm (0'8.27")
HH9	Overload height at max. lifting height	4660 mm (15'3.46")	4660 mm (15'3.46")
N	Payload - at maximum reach	1730 kg (3814 lb)	1730 kg (3814 lb)
N	Payload at 300 mm above ground	The payload of the machine is limited by the maximum weight on forks at 2500 kg (5,511 lb)	

PAYLOAD (80 % of tipping load)		AT900	AT1050
EVEN GROUND 80%			
①	Permissible load according to EN 474-3	2350 kg (5,181 lb)	2860 kg (6,305 lb)
②	Permissible load according to EN 474-3	1730 kg (3,814 lb)	2150 kg (4,740 lb)
③	Permissible load according to EN 474-3	1420 kg (3,130 lb)	1800 kg (3,968 lb)
